BACKGROUND

Statistics must accurately and reliably portray reality
European Statistics Codex

Citizens' health is the greatest value that describes the country's socioeconomic situation and is formed due to adequate organization and efficient operation of the governance system.

Sound health policy and strategy are critical for public health maintenance and strengthening. Successful solution of the health system challenges is to great extent dependent on access to updated information of current situation, as well as the quality, transparency and completeness of available data.

The health information system plays a key role in implementation of the health reforms, drafting of strategies, as well as for monitoring and effective performance evaluation.

Information and statistics are essential in development of reforms, policy and strategy, organization of preventive measures and development of up-to-date healthcare models. They serve as a valid ground for situation analyses, assessment, forecast and decision-making. Situation analysis enable guiding reforms and making effective investments.

One of the priority goals of the Ministry of Health is the introduction of the e-Health information system in 2017, which aims to advancing the health system by improving the quality, accessibility and efficiency through information systems.

Implementation of an integrated health information system in RA implies comprehensive reform of the healthcare system through implementation of modern information and communications technologies, which will enable delivering high quality, safe, accessible and affordable healthcare services to the population.

* Live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of the pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached; each product of such a birth is considered live-born.

1. Therapeutic, cardiological, gastroenterological, allergological, restorational treatment, physiotherapeutic, endocrinologic, haemotological, nephrological, rheumatological, pulmonological beds are included in the number of beds for therapeutic patients.

For surgical patients - surgical, neurosurgical, toracal surgery, cardiological, vascular surgery, traumatological, burn, orthopedical, urological, stomatological, proctological, purulent surgery

For oncological patients- oncological, radiological, x - ray surgery,

For pregnant and woman in childbirth - pregnant and woman in childbirth, pathology of pregnancy;

For gynaecological patients-gynaecological, for abortions

2 If pediatric beds include all pediatric beds except infectious,tuberculosis',dermatovenerological and psychiatric beds

3 The indicator is calculated on the number of females of fertile age

4 The indicator is calculated on the number of female population
