Medical statistics is the key to evaluating the healthcare system in the country, is a guideline for elaborating health policies and strategies and a guide for further investment.

Citizens' health is the greatest value that describes the country's socioeconomic situation and is formed due to adequate organization and efficient operation of the governance system.

Sound health policy and strategy are critical for public health maintenance and strengthening. Successful solution of the health system challenges in great extent depends on access to updated information of current situation, as well as the quality, transparency and completeness of available data.

The process of healthcare organization and managements relies on reliable and complete statistical data in every country in the world.

Information and statistics are essential in development of reforms, policy and strategy, organization of preventive measures and development of up-to-date healthcare models.

All medical data is elaborated and analyzed through the help of medical statistics.

With the help of medical and statistical data, various analyzes are conducted on the prevalence and trends of the most frequently diseases among the population, the activities of outpatient and hospital health care facilities, the quality of healthcare, livelihood, geographical accessibility, availability and provision of human resources, the relationship between the population's living conditions and health levels, about the effect of health behavioral and biological factors, as well as on the assessment of the effect of determinants on health.

Implementation of an integrated health information system in RA implies comprehensive reform of the healthcare system through introduction of modern information and communications technologies, which will enable delivering high quality, safe, accessible and affordable healthcare services to the population.

The Yearbook consists of six sections: demographics, health indicators, non-communicable diseases, diseases of the circulatory system, neoplasms system diseases, neoplasms, maternal and child health, immunization, health resources and facilities and the human resources. It is important to note that statistical data is presented in some cases by age groups, as well as by regions, as well as by chronological charts, including information collected up to 32 years.

Some of the information presented in the Yearbook is also available at the official website of NIH, MoH, RA (<http://nih.am/am>) in the sub-section "The electronic database of healthcare data" of the Health Information Analytical Center. PX ELECTRONIC Database is an electronic platform and enables to present existing health information in a concise, user-friendly and effective way

* Live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of the pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. Each product of such a birth is considered live-born.

1. Therapeutic, cardiological, gastroenterological, allergological, rehabilitation treatment, physiotherapeutic, endocrinologic, haemotological, nephrological, rheumatological, pulmonological beds are included in the number of beds for therapeutic patients.

For surgical patients - surgical, neurosurgical, toracal surgery, cardiological, vascular surgery, traumatological, burn, orthopedical, urological, stomatological, proctological, purulent surgery

For oncological patients- oncological, radiological, x-ray surgery;

For pregnant and woman in childbirth - pregnant and woman in childbirth, pathology of pregnancy;

For gynaecological patients-gynaecological, for abortions

2 Pediatric beds include all pediatric beds excluding infectious, tuberculosis', dermatovenerological and psychiatric beds

The indicator is calculated from the total number of children

3 The indicator is calculated from the total number of fertile age females

4 The indicator is calculated from the total number of female population
